

Statistics in Management Science (Arnold Applications of Statistics Series)

This is the first book to introduce senior level students of management science practicing managers to the modern powerful statistical methods that are available for optimizing and improving business processes. Using realistic case studies from businesses, this book explains the key statistical concepts workers in this field need to know. In particular, there is a focus on the use of probabilistic methods and statistical analysis in a business context and the value of these methods for managers. The mathematical explanations are comprehensive with an emphasis on the essential principles.

Statistics is a branch of mathematics dealing with the collection, analysis, interpretation, presentation, and organization of data. In applying statistics to, for example, a scientific, industrial, or social problem, Statistics is a mathematical body of science that pertains to the collection, analysis, interpretation London: Arnold.(1998) Statistics in finance, Edward Arnold.
