

Active Ingredients Used in Cosmetics: Safety Survey

Ingredients are used in cosmetics to give them specific properties. Certain ingredients, so called active ingredients, may produce pharmacological or toxic effects under certain conditions. Cosmetic products containing such ingredients may pose a health risk both because of their potential toxicity and because they may mask underlying serious diseases and consequently cause a dangerous delay in diagnosis and treatment. The objective of this study is to give safety information on certain active ingredients which give raise to toxicological concerns and for which restrictions of use in cosmetics should be considered. Monographs were prepared for 45 active ingredients for which no specific regulations exist . . Contents General background 1. Aim of the safety survey 2. General principles, procedures and criteria 2.1 Selection of ingredients 2.2 Working methods 2.3 Type of data collected and criteria 2.4 Outlook 45 Safety monographs on specific active ingredients 1. Aloe extracts with anthraquinones 2. Aminophylline 3. Arbutin 4. Arnica montana extracts of flower heads 5. Azelaicacid 6. Balsam of Tolu 7. Caffeine 8. Camphor 9. Chelidonium majus extract 10. Domiphen bromide 11. Econazole 12. Elubiol 13. Glycyrrhetic acid 14. Escin 15. Esculin 16. Eucalyptol 17. Foeniculum vulgareessential oil 18. Fucusvesiculosus 19. Fumaricacid 20. Ibuprofen 21. Iodine organically bound 22. Ketoconazole 23. Kojicacid 24. Melatonin 25. Menthol 26. Methyl nicotinate 27. Methyl salicylate 28. Miconazole 29. Sodium perborate 30. Persulfatesalts 31. Podophyllum peltatum extract 32. Pregnenolone/ Pregnenolone acetate 33. Retinaldehyde 34. Retinol 35. Rutin 36. Sassafras albidum essential oil 37. Stevioside 38. Symphytum offidnale extracts 39. Theophylline 40. Tioxolone 41. Tocopherol/Tocopherol esters 42. Tranexamic acid 43. Tussilago farfara 44. Urea 45. Usnic acid/Usnic acid salts Index
