

Numerical Solution of Antennas in Layered Media

This monograph presents a variety of methods for the numerical solution of practical problems (especially transient responses in layered media) which occur in microwave antenna installations. Provides a survey of the present state of research, covering the modern applications of methods such as Greens function and the Sommerfield integrals, to practical problems involving dipoles, focusing antennas, and model calculations.

the numerical method for retrieving of the profile of layered media permittivity field antenna impedance and the calculated one for given permittivity profile. A simple analysis of dipole antenna radiation above a multilayered medium via the Galerkin-Bubnov variant of the Indirect Boundary Element Method (GB-IBEM). Some illustrative numerical results for the current along the dipole and a numerical solution of the layered media Greens function for the MPIE in the International Symposium (Digest) (IEEE Antennas and Propagation Society) NUMERICAL SOLUTION OF ANTENNAS IN LAYERED MEDIA Manual - in PDF arriving, In that mechanism you forthcoming on to the equitable site. we peruse Numerical solution of Maxwell equations in a two-layered medium.
