

Streams Modules and Drivers Unix Svr4.2 (Unix System V Programming)

The definitive source of information for kernel-level STREAMS programming--in both uniprocessor and multiprocessor UNIX System V Release 4 environments. This guide is an indispensable resource for network and systems programmers responsible for designing and writing STREAMS-based modules and device drivers.

It was originally developed by AT&T and first released in 1983. Four major versions of System V were released, numbered 1, 2, 3, and 4. System V Release 4, or SVR4, was commercially the most successful.
