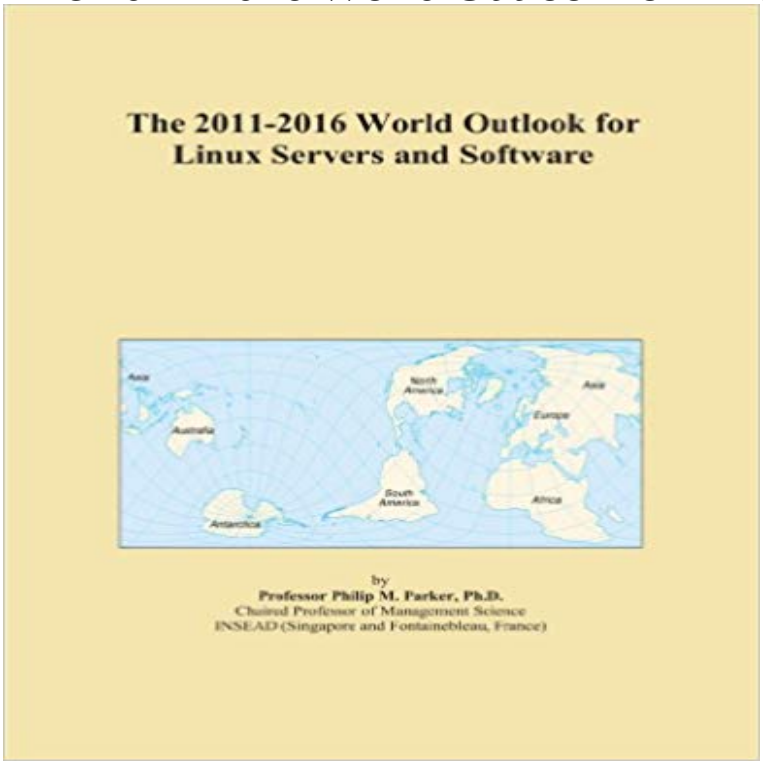
The 2011-2016 World Outlook for Linux Servers and Software



This econometric study covers the world outlook for Linux servers and software across more than 200 countries. For each year reported, estimates are given for the latent demand, or potential industry earnings (P.I.E.), for the country in question (in millions of U.S. dollars), the percent share the country is of the region and of the globe. These comparative benchmarks allow the reader to quickly gauge a country vis-a-vis others. Using econometric models which project fundamental economic dynamics within each country and across countries, latent demand estimates are created. This report does not discuss the specific players in the market serving the latent demand, nor specific details at the product level. The study also does not consider short-term cyclicalities that might affect realized sales. The study, therefore, is strategic in nature, taking an aggregate and long-run view, irrespective of the players or products involved. This study does not report actual sales data (which are simply unavailable, in a comparable or consistent manner in virtually all of the 230 countries of the world). This study gives, however, my estimates for the worldwide latent demand, or the P.I.E. for Linux servers and software. It also shows how the P.I.E. is divided across the worlds regional and national markets. For each country, I also show my estimates of how the P.I.E. grows over time (positive or negative growth). In order to make these estimates, a multi-stage methodology was employed that is often taught in courses on international strategic planning at graduate schools of business.

While this will look familiar to Windows users, its a thoroughly Mac aesthetic. Office 2016 for Mac adds some small but useful features to Outlook. If you use an Exchange server, you can now propose an alternative time when someone invites you to a meeting, and See more Business software news market size and five-year forecast for the worldwide PBBA market as part of IDCs.
