

RF Photonic Technology in Optical Fiber Links

RF photonic components, transmission systems, and signal processing examples in optical fibers are reviewed by leading academic, government, and industry scientists working in this field. This volume introduces various related technologies such as direct modulation of laser sources, external modulation techniques, and detectors. The text is aimed at engineers and scientists engaged in the research and development of optical fibers and analog RF applications.

RF Photonic Technology in Optical Fiber Links - edited by William S. C. Chang September 2002. In many applications, radio frequency (RF) signals need to be transmitted and processed without being digitalized. Optical fiber provides a transmission medium.
