

# Statistical Signal Processing for Neuroscience and Neurotechnology

This is a uniquely comprehensive reference that summarizes the state of the art of signal processing theory and techniques for solving emerging problems in neuroscience, and which clearly presents new theory, algorithms, software and hardware tools that are specifically tailored to the nature of the neurobiological environment. It gives a broad overview of the basic principles, theories and methods in statistical signal processing for basic and applied neuroscience problems. Written by experts in the field, the book is an ideal reference for researchers working in the field of neural engineering, neural interface, computational neuroscience, neuroinformatics, neuropsychology and neural physiology. By giving a broad overview of the basic principles, theories and methods, it is also an ideal introduction to statistical signal processing in neuroscience. A comprehensive overview of the specific problems in neuroscience that require application of existing and development of new theory, techniques, and technology by the signal processing community. Contains state-of-the-art signal processing, information theory, and machine learning algorithms and techniques for neuroscience research. Presents quantitative and information-driven science that has been, or can be, applied to basic and translational neuroscience problems.

For over a hundred years, it was believed that profound understanding of the neurophysiological mechanisms underlying behavior required - 6 sec Read here <http://?book=012375027X> [PDF] Statistical Signal Processing for Neuroscience and Neurotechnology (Hardback). eBook Statistical Signal Processing for Neuroscience and Neurotechnology (Hardback).
